Subject Index

A

Abstraction refinement model, software development process control and, 22:117
Acceptance/understanding, formal methods and, 21:115
Action notation, 21:291
Actor-based object-oriented languages, lazy replacement for, 20:53
Ad hoc, definition of, 22:149
Ada Maintenance Tool kit, parser for, 23:235
Adaptive design, economics of, 21:117
Algorithmic programming, logic vs., 23:225
Algorithms
  hierarchical network and distributed, 22:191
  multiattribute records distribution with, 22:107
  process clustering with coupling metric, 22:217
  semaphore operation and quorum-based, 21:103
  string pattern-matching, 22:207
Analytic hierarchy process
  computer family selection and, 22:17
  prioritizing software development productivity factors with, 22:129
  software estimation with, 21:179
Application generators, 23:27
Applications software, iteration in, 22:167
Approximations, generalized stochastic Petri net modeling and, 21:163
Augmented transition networks, 21:129

B

BIDDLE, data-driven LISP machine, 23:51
Biographies, 20:101, 20:203, 21:113, 21:197, 21:321, 22:78, 22:147, 22:225, 23:81, 23:205
Branch analysis, 20:125

C

C components, software reuse using, 20:19
Calculus of Communicating Systems (CCS), 21:129
Circuit-switched interconnection network, nonuniform traffic patterns with, 20:189
Class interface design, 23:85
Classification tree analysis, 20:237
Code, understanding, 23:269
Communicating Sequential Processes (CSP), 21:129, 21:201
Computer family, selection methodology for, 22:17
Computing technology, performance evaluation of, 20:153
Concurrency control, inheritance mechanism and, 20:53
Corporate metrics, guidebook and spreadsheet tool to, 23:245
Cost performance ratio, performance evaluation with, 20:153
Coupling metric, process clustering with algorithm based on, 22:217
Coupling, software metric system for module, 20:295

D

Data bases
  European Declarative System data base server, 21:41
  scientific research data management with issue-based information service and object-oriented approach to, 23:183
  transaction management in design, 22:3
Data collection strategy, 23:257
Data flow analysis, formal requirements specification method based on, 21:141
Data structure complexity, measurement of, 20:217
Data, archived, 20:87
Data-driven LISP machine, emulation of, 23:51
  ddgraphs, 20:125
Debuggers
  cyclic, 22:63
  distributed dynamic runtime software debugger (Ddbx-LPP), 22:27
  parallel and distributed processing (DPDP) system, 22:45
  POKER, 22:27
  PROVIDE, 22:27
  trace of program execution, 22:63
Decoupling, understanding and acceptance, 21:115
DeMarco data flow diagrams (DDFD), 21:141
DESCARTES, 21:305
Design transactions, 22:3
Diagnosis, project, 21:17
Dimensionality reduction, software development effort estimation and, 21:187
Distributed data base management system, query processor for trusted, 21:49
Distributed dynamic runtime software debugger (Ddbx-LPP), 22:27
Distributed program monitor, design and implementation of, 22:63
Distributed programs
  debugging, 22:63
  tracing execution of, 21:201
Distributed query processor, trusted distributed data base management system and, 21:49
Distributed systems
  distributed algorithm in, 22:191
  parameterized semaphore operations in, 21:103
Distribution-based statistical sampling, 20:107
Documentation, writing maintenance, 21:1
Domain analysis, definition of, 22:149
Domain model, software reengineering and maintenance with, 20:37
Dynamic Error Flow Analysis, 20:253

E

Edges, unconstrained, 20:125
Education, programming and, 22:167
Embedded mode, 23:3
Emulation, transputer-based, 23:51
English majors, maintenance documentation by, 21:1
Environment, distributed, logical machine operating systems and, 21:27
Environmental transformation language (ETL), 20:273
Equivalent confidence, software, 20:93
Error detection, syntax-directed editors and, 23:65
Error flow analysis, semantic metrics through, 253
Error localization, interconnectivity analysis techniques for, 20:267
Errors, software, 22:1
Esterel system, 21:129
European Declarative System data base server, parallel recovery scheme for, 21:41
Event sets, prototyping concurrent, timed systems and, 21:253
Event-action model, debugger for parallel and distributed processing (DPDP) system and, 22:45

F

Failure propagation and transformation notation, 21:279
Fault tree analysis, 21:279
Fault-tolerance analysis, hypercube system, 21:71

File access patterns, 23:257
Formal description techniques, 21:151
Formal methods, 21:115, 21:141
Formal requirements specification method, 21:141
FP2 parallel language, implementation model for, 21:89
Frame-based metadata design, 20:87
Franz LISP, performance study of, 20:163
Functional languages, performance study of, 20:163
Functional testing, 21:229

G

Generalized stochastic Petri nets, 21:163
Generic application generator, development and instantiation of, 23:27
Glotos layout tool, 21:151

H

Hierarchical network, distributed algorithm for managing resources in, 22:191
Hypercube systems, fault-tolerance analysis of, 21:71

I

Implementation model, FP2 parallel language and, 21:89
Inheritance mechanism, concurrency control and, 20:53
Inheritance models, object-oriented programming and implementation, 20:3
Interconnection language, reuse and, 23:9
Interconnectivity analysis techniques, error localization with, 20:267
Interface design, correctness in, 23:85
Interface, application and, 22:179
Interrupts, specification of systems with, 21:291
Issue-based information service (IBIS), scientific research data management with object-oriented data base technology and, 23:183
Iteration, applications software and, 22:167

K

Knowledge-based test planning, 20:115

L

Language processing, 23:27, 23:39, 23:51, 23:65
Language, interconnection, 23:9
Language-based interactive environments, syntax-directed editors and, 23:65
Languages
  actor-based object-oriented, 20:53
  concurrent object-oriented language, 21:253
  DESCARTES, 21:305
  Environmental transformation language (ETL), 20:273
  executable software specification languages, 21:305
  FP2 parallel language, 21:89
  functional, 20:163
  object-oriented, 21:3, 22:93
  inheritance model for, 20:3
  RAPIDE, 21:253
  SIMULA 67, 21:3
  specification and description (SDL), 21:129
Layout tools, 21:151
Load balancing policies, performance modeling and analysis of, 20:169
Local area network, object-oriented simulation of medium-access protocols in, 23:139
LOFT, test selection tool, 21:229
Logic programming, constructing, 23:225
Logical machine monitor, 21:27
Logical machine operating systems, 21:27
Lotos, Glotus layout tool and, 21:151

M

Masking, 21:291
Measurement-driven modeling, 20:237
Metadata sets, frame-based design for, 20:87
Metasystem approach, software specifications environment and, 20:273
Module coupling, software metric system for, 20:295
Multiattribute records distribution, algorithm for, 22:107
Multiparadigm programming, translator-based, 23:39
Multiple instruction multiple data architecture, mutation testing with, 20:135
Multiproject system dynamics model, 22:151
Mutation testing, high-performance, 20:135

N

Network file system, file characteristics in, 23:257
Network protocols, object-oriented simulation, concurrent, of, 23:139

O

Object model, software engineering process, 23:171
Object orientation, theory and practice, 20:1
Object, notion of, 21:3
Object-orientation application sample, 23:123, 23:139
  software development and, 23:151, 23:163, 23:171, 23:183, 23:199
Object-oriented concurrent LISP multiparadigm environment, 22:91
Object-oriented development, standards for, 23:83, 23:85, 23:95, 23:111
Object-oriented languages
  concurrent, 21:253
  implementation inheritance model for, 20:3
  LISP in, 22:91
  objects in, 21:3
Object-oriented life-cycle systems development, 23:123
Object-oriented metrics, maintainability prediction with, 23:111
Object-oriented model, software maintenance and, 22:81
Object-oriented programming, workshop on, 23:199
Object-oriented technology, evolution of, 23:163
Operating systems, logical machine monitor and, 21:27
OPNets, real-time system modeling with, 20:69
Organic mode, 23:3
Organizations, computer family selection, 22:17

P

Parallel processors, debuggers and, 22:27, 22:45
Parallel systems, FP2 parallel language implementation model, 21:89
Parallel/distributed systems, performability of, 21:71
Parser, incremental, 23:235
Pattern, string pattern-matching algorithm, 22:207
Performability, parallel/distributed systems and, 21:71
Performance evaluation
  circuit-switched interconnection networks under nonuniform traffic patterns, 20:189
  functional languages and, 20:163
  load balancing policies with priority queueing, 20:169
  production-based approach to, 20:153
Personal file management system, 23:257
Petri net modeling, OPNets, 20:69
Petri nets
  fault-tolerance analysis of hypercube systems using, 21:71
  formal specification of reactive systems and, 21:129
  generalized stochastic, 21:163
Policy, structural software model and, 22:81
Post-delivery review, 22:79
Priority queueing, load balancing policies with, 20:169
Process clustering, coupling metric algorithm and, 22:217

Program modification, 23:269
Program understanding, 23:269
Programming
  algorithmic vs. logic, 23:225
  logic, heuristics for constructing, 23:225
  translator-based multiparadigm, 23:39
  workshop on object-oriented, 23:199
Programming education, 22:167
Programming language-oriented systems
  Calculus of Communicating Systems (CCS), 21:129
  Communicating Sequential Processes (CSP), 21:129, 21:201
  Esterel system, 21:129
  unbounded nondeterministic iterative transformations (UNITY), 21:129
Project behavior, 22:151
Project diagnosis, 21:17
Prototypes
  concurrent, timed systems, 21:253
  Vienna Development Methods (VDM) specifications and functional, 21:267

Q
Questionnaire, project diagnosis and, 21:17

R
Rank hashing allocation, two-disk system and, 22:107
RAPIDE, 21:253
Reactive systems, formal specification methods for, 21:129
Real-time system modeling, OPNets and, 20:69
Recovery scheme, European Declarative System data base server and, 21:41
Recovery, 21:291
Remote procedure call (RPC)-oriented programs, debugging, 22:63
Requirements analysis, 21:141
Reuse of persistent code and object code (ROPCP), 23:9

S
Safety-critical systems, interrupts in, 21:291
Sampling strategies, functional testing and, 20:107
SASL, performance study of, 20:163
Securities exchange, automatic trade execution system, 21:245
Security, trusted distributed data base management system and, 21:49
Semantic metrics
  error flow analysis and, 20:253
  framework for defining, 20:237
  software testability and, 20:207
Semaphore operations, parameterized, 21:103
Semidetached mode, 23:3
SIMULA 67, 21:3
Software complexity, 20:217
Software crisis, 22:141, 23:269
Software design
  economics of adaptive, 21:117
  impact of user interface design on, 22:179
  testability and faults in, 20:93
Software development
  analytic hierarchy process and, 22:129
  application generators and, 23:27
  effort prediction in, 21:179, 21:187
  measurement program in, 20:227
  measurement-driven modeling in, 20:237
  modes of, 23:7
  object-oriented, 23:83, 23:85, 23:95, 23:111, 23:151, 23:163, 23:171, 23:183, 23:199
  object-oriented concurrent LISP multiparadigm environment, 22:91
  process control, 22:117
Software engineering
  distributed dynamic runtime software debugger (Ddbx-LPP), 22:27
  object model of process of, 23:171
  object-oriented analysis and design methodology in, 23:123
  object-oriented technologies in, 23:163
  software crisis, 22:141
Software engineering measurement program, 20:227
Software error detection, 22:1
Software estimation
  analytic hierarchy process for, 21:179
  dimensionality reduction in, 21:187
  process of, 23:1
Software faults, 20:93, 20:207
Software house, quality system for, 23:211
Software maintenance
  domain model-driven, 20:37
  future of, 23;209
  incremental parsing for, 23:235
  object-oriented metrics in prediction of, 23:111
  object-oriented model and, 22:81
  process control, 22:117
  writing documentation for, 21:1
Software measurement. See Software metrics
Software metrics, 20:205, 20:207, 20:217, 20:227, 20:237, 20:245, 20:253, 20:267, 20:273, 20:295
  guidebook and spreadsheet tool to, 23:245
Software models, structural, 22:81
Software productivity
  adaptive design and, 21:117
  software reuse and, 20:19
Software project management, multiproject perspective of single-project dynamics, 22:151
Software quality, 21:199
  adaptive design and, 21:117
  post-delivery review, 22:79
  software house and, 23:211
  software reuse and, 20:19
  testability and, 20:93
Software reengineering, domain model-driven, 20:37
Software reuse, 20:19, 20:37
  interconnection language for, 23:9
  large project experience with object-oriented methods and, 23:151
Software safety analysis, integrated tool set for, 21:279
Software specification, 21:199, 21:201
  algebraic specifications for, 21:229
  executable software specification languages, 21:305
  functional prototypes and, 21:267
  languages, executable, for, 21:305
  metasystem approach to, 20:273
  reactive system, 21:129
Software structure analysis, interconnectivity in, 20:267
Software testability, 20:93
  semantic metrics for, 20:207
Software testing, 20:105, 20:115, 20:125, 20:135, 21:201
  algebraic specifications in, 21:229
  automated flow graph-based, 23:95
  functional testing, 20:107
Software validation, 21:199, 21:201
Software verification, 21:199, 21:201
Specification and description language (SDL), 21:129
Spreadsheet tool, corporate metrics program, 23:245
Stennis Information Management System, 20:87
String pattern-matching algorithm, 22:207
Structural testing, 20:125
Subway, automatic, software testing on, 21:229
Syntax-directed editors, efficient-error recovery with, 23:65
System acceptance testing, 20:115
System compliance, 20:115
System modelers, approximation accuracy for, 21:163

T
Terminology, 22:149
Tool set, software safety analysis with integrated, 21:279
Trace specifications, trade execution system and, 21:245

Tracing techniques, distributed programs and, 21:201
Trade execution, automatic, formal specification of, 21:245
Traffic patterns, nonuniform, circuit-swtiched interconnection networks under, 20:189
Transaction management, desaign data bases and, 22:3
Translator-based multiparadigm programming, 23:39
Translators, programming, multiparadigm, and, 23:39
Transputer, data-driven LISP machine emulation and, 23:51

U

Unbounded nondeterministic iterative transformations (UNITY), 21:129
Understanding, program, 23:269
Understanding/acceptance, formal methods and, 21:115
User file-usage patterns, 23:257

V

Vienna Development Method (VDM), 21:141
functional prototypes and specifications for, 21:267

W

Writing, maintenance documentation, 21:1
